

Tranexamic acid 3% Serum

TX-HA SERUM

Description

An ultralight, fluid serum packed with powerful brightening and hydrating actives for quick and visible results

Claim

- Helps to lighten the appearance of pigmented spots
- Restores skin radiance and clarity
- Deep and long lasting hydration

Key Ingredients

Tranexamic Acid

Traditionally used as a haemostatic agent, the whitening effects of tranexamic acid was incidentally discovered when it was used as a coagulant to treat aneurismal subarachnoid haemorrhage. It is excellent at treating pigmentation, and its anti-inflammatory properties helps to reduce post-acne hyperpigmentation.

Low Molecular Weight Hyaluronic Acid

The smaller molecular weight and high moisture retention properties of this hyaluronic acid allow it to penetrate into the skin to provide significant deep moisturisation to the epidermis and dermis, while its UV damage-repairing and free radical-scavenging properties help slow down the ageing process, resulting in increased skin elasticity and a strengthened skin barrier function.

DIRECTIONS

Apply on a cleansed and toned face
